

PLANTATION SHUTTER

SPECIFICATION

Plantation Shutters offer a refined, high-end aesthetic, blending classic elegance with modern craftsmanship and durable materials. Designed to last, they deliver timeless style and enduring quality for years to come.

BROMLEY COLLECTION

Made from HSPVC, these faux wooden shutters are warp- and crack-resistant, perfect for moisture-heavy rooms like bathrooms and kitchens due to their 100% waterproof material.

Min	Panel Width	290mm
Max	Panel Width	2460mm
Min	Panel Height	466mm
Max	Panel Height	2506mm
Max	No. of Panels	4
Max	No. of Joined Panels	2

BROMLEY (Snow White & True White)

Available with a shorter delivery time.*

Min	Panel Width	270mm
Max	Panel Width	2460mm
Min	Panel Height	466mm
Max	Panel Height	2506mm
Max	No. of Panels	4
Max	No. of Joined Panels	2

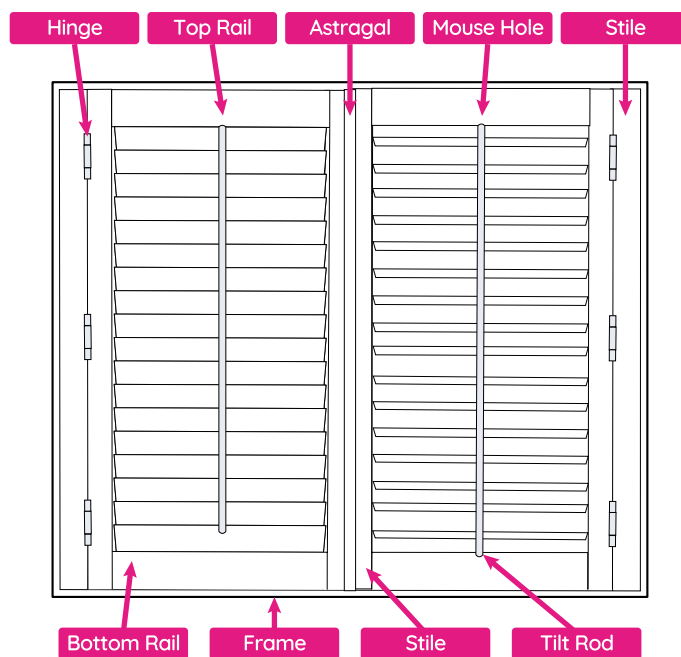

KENSINGTON COLLECTION

Crafted from durable Paulownia wood, these real wood shutters are also resistant to cracking and warping. As one of the lightest real woods globally, it enhances the shutters' smooth operation, longevity, and durability.

Min	Panel Width	249mm
Max	Panel Width	2696mm
Min	Panel Height	449mm
Max	Panel Height	3000mm
Max	No. of Panels	4
Max	No. of Joined Panels	2

PART MAP

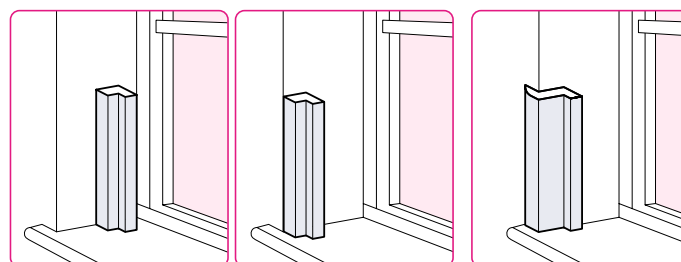

Shown is a full-height shutter with an all-around L-shaped frame and a standard tilt rod.

Frames are available in a Z-shape (Z Frame) or L-shape (L Frame).

L FRAME

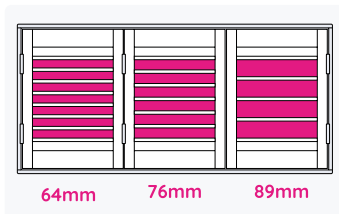

Z FRAME

Positioned further back inside a recess

Positioned at the edge of a recess

Positioned outside of a recess

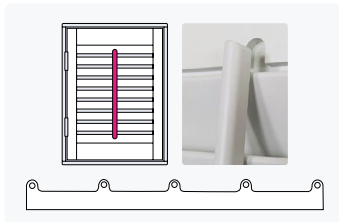

Shutters are available in three louver sizes: 64mm, 76mm, and 89mm. Larger louvres offer several benefits:

Enhanced Proportions - On larger windows or doors, they create a balanced, proportional look compared to smaller, more numerous louvres that might appear cluttered.

Clearer Views - Fewer slats mean less obstruction, providing a more open, expansive view of the outdoors.

More Light - Larger louvres allow more natural light into the room, offering better control over brightness.

COMPONENTS

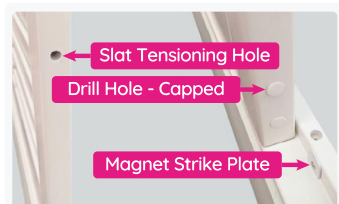

Tilt Rods

Tilt rods control the opening and closing of the slats. Positioned at the centre of the panel, they are used by pushing the rod up into a small crevice ("mouse hole") to close the slats.

Approx. size: 12.3mm width x 16.2mm depth.

A hidden rod option is available, providing a cleaner appearance by neatly folding down the side of the slat area. Do not use these rods to open or close the panel doors.

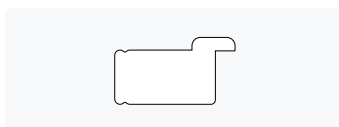

Door Holes & Magnets

Slat adjustment holes remain open for pitch changes, while other drill holes are capped with coordinating covers.

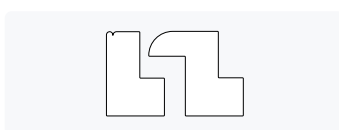

Two magnets located at the top and bottom of the door panels ensure a secure closure. These are positioned approximately 1-1.5cm from the edge of the stile. This ensures a secure closure.

Striking plates are fitted on the top and bottom of the panel doors.

Astragal Stile

The shutter stiles are designed in an Astragal style, where the doors meet in the middle with a small vertical lip. This overlapping feature reduces light bleed and delivers a seamless finish, with an approximate 1cm overlap.

Frames

Your shutter frame will come in either an L-shape or Z-shape. Z Frames are designed for fitting the shutter on the edge of the window reveal, with the frame slotting around the corner to create a smooth transition between the wall and the blind. L Frames can be fitted anywhere inside the window reveal and feature a decorative beaded finish. In both cases, ensure you measure the exact spot where you intend to fit the frame.

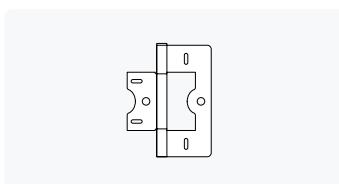

Frames (Bromley Snow & True White)

Z Frame dimensions are currently unavailable. Please contact our customer service team if you require more information.

Mid Rails

Mid-rails, exclusive to full-height shutter styles, are automatically added to panels with longer drops to enhance durability. They strengthen the shutters and allow independent operation of the top and bottom slats (louvres/blades). Mid-rails are included for drops over 1600mm, and you can specify their placement when ordering.

Hinges

The self-mortice hinges are made from rust-resistant stainless steel and are available in either powder-coated white or plain chrome, selected to coordinate with your chosen slat colour. These hinges are evenly positioned along the sides of the door panels to secure them to the shutter framework. The number of hinges per panel varies according to width, as follows:

Up to 1200mm	2 Hinges	1201-1800mm	3 Hinges	1801-2400mm	4 Hinges
2401-300mm	5 Hinges	3001-3600mm	6 Hinges		

For example, on a single panel, the hinges are positioned 7.5cm from the top and bottom of the panel.

Tier on Tier Shutters - T-Bar

Bromley True White & Snow White tier-on-tier shutters require a supporting divide rail. Please refer to the product page for more information.

We ask that you measure up from the window, to the where you want the centre of the divide to be.

On all other Tier On Tier shutters, there will be a bar over 1500mm width.
